At the end of the 1953 spring digging season, the NAPERVILLE NURSERIES, INC. will go out of business. In order to liquidate it's supply of nursery stock the attached sheets of BARGAINS are offered to the trade. All stock must be sold or it will go to the brush pile. All sales are on an as-is basis, without guarantees, either expressed or implied. ON ORDERS FOR LESS THAN 100 OF ANY ITEM THE PRICE WILL BE INCREASED BY 25%. All prices are f.o.b. the nursery, with the purchaser doing his own digging. The prices listed reflect savings to the purchaser doing his own digging.

Prices are 30 days net to those with established credit, otherwise cash with the order.

REVIEW OF THE LITERATURE ON THE INFLUENCE OF
SOCIAL SUPPORT ON MENTAL HEALTH

INTRODUCTION

The concept of social support has been defined in many ways. In general, social support is defined as the resources available to an individual from his/her social network. These resources may be emotional, informational, or instrumental in nature. Social support has been shown to have a positive influence on mental health outcomes. This review will discuss the literature on the relationship between social support and mental health, focusing on the types of social support, the mechanisms through which it operates, and the specific mental health outcomes that are influenced by social support.

DEFINITION OF SOCIAL SUPPORT

Social support is often conceptualized as a resource that is available to an individual from their social network. This network can consist of family members, friends, coworkers, or other individuals who provide emotional, informational, or instrumental support. Emotional support refers to the availability of a listening ear, emotional reassurance, and emotional validation. Informational support refers to the provision of information, advice, and guidance. Instrumental support refers to the provision of physical resources, such as money or transportation. Social support has been shown to have a positive influence on mental health outcomes. This review will discuss the literature on the relationship between social support and mental health, focusing on the types of social support, the mechanisms through which it operates, and the specific mental health outcomes that are influenced by social support.
